

US Cutting Tool Orders Totaled \$178.1 Million in August 2022, Bringing Monthly Total to 8.9% Over 2021

McLean, Va. (October 18, 2022) – August 2022 U.S. cutting tool consumption totaled \$178.1 million, according to the U.S. Cutting Tool Institute (USCTI) and AMT – The Association For Manufacturing Technology. This total, as reported by companies participating in the Cutting Tool Market Report collaboration, was up 2.6% from July’s \$173.5 million and up 8.9% when compared with the \$163.5 million reported for August 2021. With a year-to-date total of \$1.4 billion, 2022 is up 7.9% when compared to the same time period in 2021.

These numbers and all data in this report are based on the totals reported by the companies participating in the CTMR program. The totals here represent the majority of the U.S. market for cutting tools.

“Some of the pricing pressures our industry has been experiencing have begun to ease,” commented Jeff Major, president of USCTI. “Cutting tool sales have remained steady since the beginning of Q2 2022. Year-over-year sales are up in the high single-digit percentages. There is some market uncertainty as we move into Q4 and beyond. Indications are that the transportation sector will be a leading market in 2023.”

Tom Haag, president at Kyocera SGS Precision Tool, also commented on how well the cutting tool industry is currently doing and spoke on the industry’s relationship with the transportation sector: “August was a surprisingly resilient month, considering that typically it is negatively impacted by the seasonality of automotive model changes and pent-up demand for summer vacations. The cutting tool market is still not back to pre-pandemic levels, but it is continually clawing its way back. As automotive manufacturing continues to recover, aerospace production in the USA is still languishing behind. Forecasts of a complete recovery are still more than one year away as we face economic headwinds and supply chain bottlenecks.”

The Cutting Tool Market Report is jointly compiled by AMT and USCTI, two trade associations representing the development, production, and distribution of cutting tool technology and products. It provides a monthly statement on U.S. manufacturers’ consumption of the primary consumable in the manufacturing process – the cutting tool. Analysis of cutting tool consumption is a leading indicator of both upturns and

downturns in U.S. manufacturing activity, as it is a true measure of actual production levels.

Historical data for the Cutting Tool Market Report is available dating back to January 2012. This collaboration of AMT and USCTI is the first step in the two associations working together to promote and support U.S.-based manufacturers of cutting tool technology.

The graph below includes the 12-month moving average for the durable goods shipments and cutting tool orders. These values are calculated by taking the average of the most recent 12 months and plotting them over time.

AMT – The Association For Manufacturing Technology represents and promotes U.S.-based manufacturing technology and its members – those who design, build, sell, and service the continuously evolving technology that lies at the heart of manufacturing. Founded in 1902 and based in Virginia, the association specializes in providing targeted business assistance, extensive global support, and business intelligence systems and analysis. AMT is the voice that communicates the importance of policies and programs that encourage research and innovation, and the development of educational initiatives to create tomorrow's Smartforce. AMT owns and manages IMTS – The International Manufacturing Technology Show, which is the premier manufacturing technology event in North America.

The United States Cutting Tool Institute (USCTI) was formed in 1988 and resulted from a merger of the two national associations representing the cutting tool manufacturing industry. USCTI works to represent, promote, and expand the U.S. cutting tool industry and to promote the benefits of buying American-made cutting tools manufactured by its members. The Institute recently expanded its by-laws to include any North American manufacturer and/or re-manufacturer of cutting tools, as well as post-fabrication tool surface treatment providers. Members, which number over 80, belong to seven product divisions: Carbide Tooling, Drill & Reamer, Milling Cutter, PCD & PCBN, Tap & Die, Tool Holder and All Other Tooling. A wide range of activities includes a comprehensive statistics program, human resources surveys and forums, development of product specifications and standards, and semi-annual meetings to share ideas and receive information on key industry trends.
