U.S. Cutting Tool YTD Consumption down 6.9% in October

October U.S. cutting tool consumption totaled \$168.99 million according to the U.S. Cutting Tool Institute (USCTI) and AMT – The Association For Manufacturing Technology. This total, as reported by companies participating in the Cutting Tool Market Report (CTMR) collaboration, was down 1.6% from September’s \$171.67 million and 4.7% when compared with the total of \$177.35 million reported for October 2015. With a year-to-date total of \$1.698 billion, 2016 is down 6.9% when compared with 2015.

These numbers and all data in this report are based on the totals reported by the companies participating in the CTMR program. The totals here represent the majority of the U.S. market for cutting tools.

“The cutting tool year-over-year data continues to indicate 2016 is moving in the right direction,” says Steve Stokey, President of USCTI. “With the uncertainty of the election behind us, businesses should be in a better position to confidently implement their plans. This should have a positive impact on the marketplace as we move into 2017.”

Greg Daco, Head of U.S. Economics at Oxford Economics adds that “after experiencing extreme volatility this summer, cutting tool shipments have stabilized. Overall, while the trend in durable goods orders and shipments remains soft, back-to-back monthly gains in orders are a signal activity may soon turn around. Looking forward, leading manufacturing indicators point to moderate growth supported by firming global

(more)

activity and stabilizing domestic activity. The uncertainty surrounding a Trump presidency remains elevated, but there are indications that he will prioritize his pro-growth fiscal agenda over his protectionist agenda.”

The Cutting Tool Market Report is jointly compiled by AMT and USCTI, two trade associations representing the development, production and distribution of cutting tool technology and products. It provides a monthly statement on U.S. manufacturers’ consumption of the primary consumable in the manufacturing process – the cutting tool. Analysis of cutting tool consumption is a leading indicator of both upturns and downturns in U.S. manufacturing activity, as it is a true measure of actual production levels.

Historical data for the Cutting Tool Market Report is available dating back to January 2012. This collaboration of AMT and USCTI is the first step in the two associations working together to promote and support U.S.-based manufacturers of cutting tool technology.

AMT – The Association For Manufacturing Technology represents and promotes U.S.-based manufacturing technology and its members—those who design, build, sell, and service the continuously evolving technology that lies at the heart of manufacturing. Founded in 1902 and based in Virginia, the association specializes in providing targeted business assistance, extensive global support, and business intelligence systems and analysis. AMT is the voice that communicates the importance of policies and programs that encourage research and innovation, and the development of educational initiatives to create tomorrow’s Smartforce. AMT owns and manages IMTS – The International Manufacturing Technology Show, which is the premier manufacturing technology event in North America. The CTPG report is compiled by AMT and all data in the report is based on the totals of actual data reported by companies participating in the CTPG program.

The United States Cutting Tool Institute (USCTI) was formed in 1988 and resulted from a merger of two national associations representing the cutting tool manufacturing industry. The Institute works to represent, promote, and expand the U.S. cutting tool industry and to promote the benefits of buying American-made cutting tools manufactured by its members. Membership includes North American manufacturers and/or remanufacturers of cutting tools, as well as tool surface treatment providers. Members, which number over 70, belong to ten product divisions: Carbide Tooling, Drill & Reamer, Metal Cutting Saw Blades, Milling Cutter, Polycrystalline Diamond & Polycrystalline Cubic Born Nitride, Substrate Materials, Surface Coating, Tap & Die, Tool Holder and All Other Tooling. A wide range of activities include a comprehensive statistics program, human resources surveys, development of product specifications and standards, and semi-annual meetings to share ideas and receive information on key industry trends.
